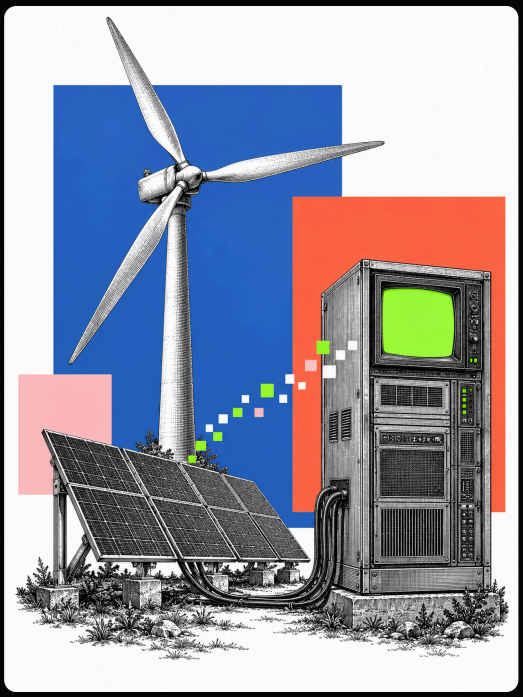
✶ CIIE · VISIT OUR BOOTH

Distributed green power × heterogeneous compute

One global power–compute network



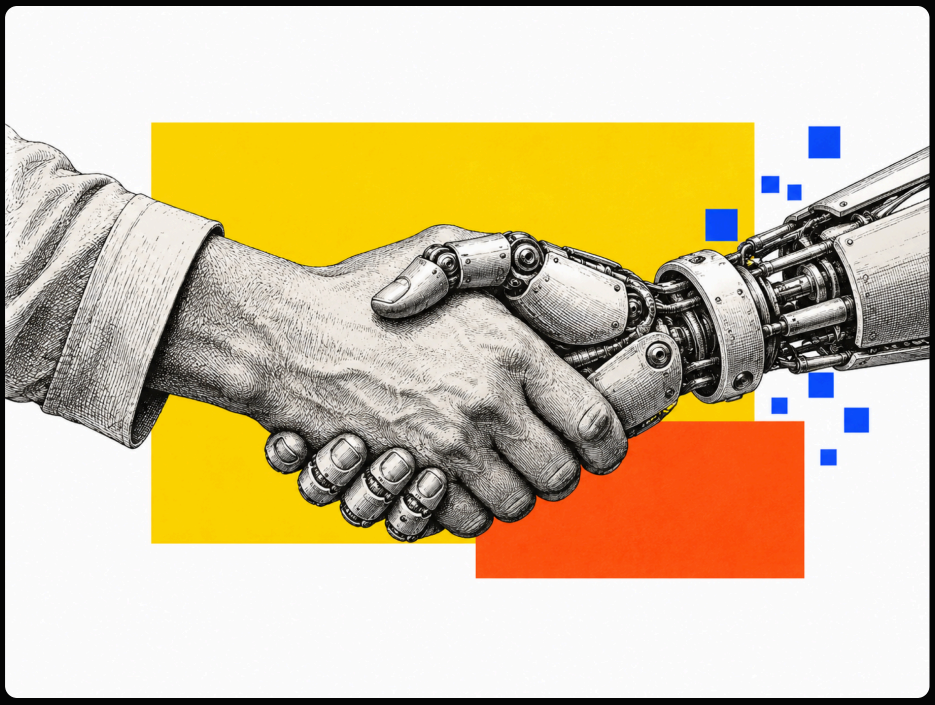
Greener. Cheaper. Same quality.

GLM, DeepSeek, Qwen and MiniMax — one FathomPeak Key for them all, from 40% of list price.

✶ ABOUT FATHOMPEAK

Green energy powering global compute

FathomPeak was founded by researchers and engineers from Tsinghua University and Peking University. Founder Lu Chang is a direct-PhD candidate in engineering at Tsinghua, researching power–compute co-scheduling. Our Tapestrix heterogeneous scheduler moves compute to where green power is, instead of moving power to compute.



✶ FACTORY AND STOREFRONT

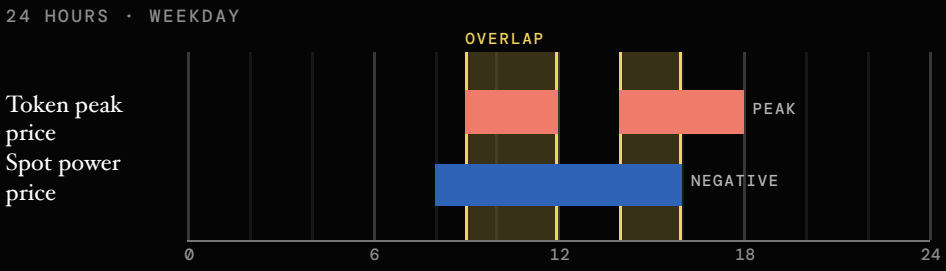
Appliances at the plant are the factory; the Token trading platform is the storefront.

✶ WHY WE DO THIS

Surplus green power. Scarce Tokens.

More and more wind and solar power cannot reach the grid, while large models queue and raise prices at the very same hours. We schedule inference to distributed wind, solar and hydro plants and turn surplus green power into Tokens on site.

More curtailment	Wind and solar utilisation keeps falling, hardest in northern China.
Midday prices collapse	At solar peak the spot price hits zero or below, so more output earns no more.
Token bills hard to control	Enterprise Token usage is surging and subscription-style budgets miss real spend.



When Tokens cost most, plant power is cheapest.

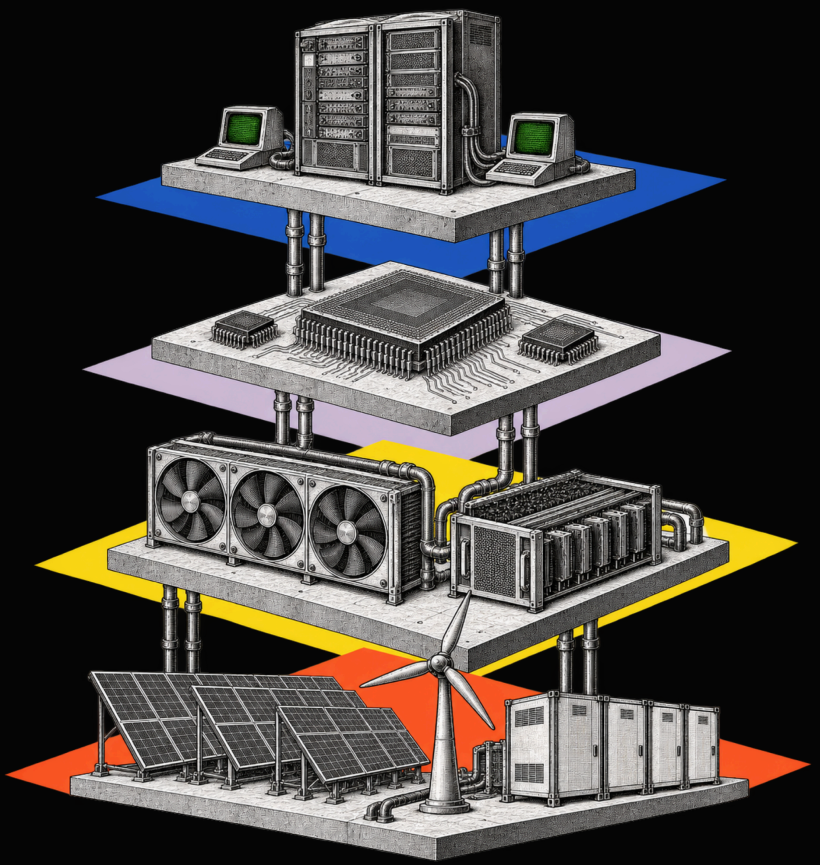
✶ INDUSTRY SOLUTIONS

01	Token export	02	AI drama & film
03	AI for Science	04	Social & companionship
05	Content moderation	06	Private deployment & agents

✶ HOW THE THREE PRODUCTS WORK TOGETHER

One order, three products

The platform takes orders, the model foundation schedules, the appliances produce, the plants supply power.



ACCESS

Green Token Trading Platform

One API for leading models, billed by Token, OpenAI- and Gemini-compatible; results delivered with an origin card.

Developers & enterprises · buy by usage

SCHEDULING

Power–Compute World Model Foundation

Couples plant output, power prices, GPU power draw, network and orders in one model that predicts ahead and picks the plant and time window.

Plants & energy companies · private deployment

COMPUTE

FPTM Token Appliances

8- and 16-GPU air-cooled, CDU tower liquid-cooled and mobile container options, running models on surplus green power beside the plant.

Asset owners & institutions · buy or co-operate

POWER

Solar, wind and hydro plants

Surplus green power feeds the appliances on site, with no new export lines.

Plants & energy companies · four ways to partner

✶ POWER-COMPUTE WORLD MODEL

Every dispatch runs in the model first

Forecast

Predicts output, prices, each appliance's power draw and incoming orders for the hours ahead.

What-if

Compares moving to another site, throttling or waiting for off-peak: cost, latency and green power for each.

Self-improving

Real results from every dispatch are written back; the model updates daily and gets more accurate.

✶ ENTERPRISE ORDERS & OVERSEAS SERVICES

Lower model costs. Clearer spending.

Buy Tokens by usage	We test with your tasks, then quote by Token usage; bank transfer, monthly settlement and VAT invoices.
Private deployment & agents	Appliances run in your server room or lab and data stays inside; agents connect to your tools, operated remotely by FathomPeak.
Token export	Our overseas operator holds CAC approval for Token export, so overseas teams can call Chinese models directly.
Channels & platforms	Model services for your own apps and channel distribution, with pricing and settlement set by agreement.

✶ ORIGIN CARD

Every order carries an origin card: which plant, which time window, how much green power and how much CO_2 avoided — ready for ESG reporting and green procurement.

The more you use, the greener your oasis: a tree grows for every ¥1,000 spent.

✶ SOLUTIONS FOR PLANTS & ENERGY COMPANIES

Your power plant can be a Token source

Joint operation	Provide site, power and appliances; FathomPeak runs technology, scheduling, operations and sales, with revenue shared by contract.
Power supply	Provide site and power; appliances funded by FathomPeak or asset partners; earn power and site fees or a revenue share.
Compute access	Connect an existing GPU centre to the platform and sell Tokens.
Run it yourself	The world model, scheduler and appliances are deployed privately at your site; you take the orders.

01	02	03	04	05
Share site details	Assess readiness	Pilot & acceptance	Sign & deploy	Operate & settle per order

✶ AWARDS & RECOGNITION

1ST PLACE	CCTV “Win in AI+”, Efficiency Leap track
1ST PLACE	BTV “Transform in Beijing”, Intelligent Compute track
SELECTED	China AI U25 Entrepreneurs · founder Lu Chang
LICENCE	CAC approval for Token export

✶ CONTACT

We’d love to hear from you
